

Amendments to the Specification:

Please add the following new paragraph after the Title and before the first paragraph on page 1:

THIS APPLICATION IS A U.S. NATIONAL PHASE APPLICATION OF PCT INTERNATIONAL APPLICATION PCT/IB2003/002969.

Please delete the paragraph, beginning at page 4, line 6, in its entirety.

~~It is an object of the present invention to provide a mobility managing method and mobile terminal that, even in the case the mobile terminal is changed in its home address upon roaming between the mobile communication networks different in service form, an incoming call from the external can be secured by the use of a representative home address to thereby flexibly cope with the Internet, as a distributed network.~~

Please replace the paragraph, beginning at page 4, line 13, with the following rewritten paragraph:

~~In order to solve the above problem,~~ The present invention has, in a mobile communication system using a mobile IP, a mobile terminal determines a main home agent and a main home address. When the mobile terminal moves to a network different in service form, a home address (sub-home address) for use on a moved-in network domain is registered as primary care of address to the main home agent. When accessed from the external, by using the main home address, even in case the mobile terminal roams between domain networks and assigned with a different home address, external communication is available by using the main home address. Also, where using DNS, registering the main home address eliminates the necessity of each registration of a local home address (sub-home address) change caused by roaming between domain networks, making it possible to cope with swift movement of the mobile terminal.

Please delete pages 46 and 47 "List of Drawing Reference Numbers" in their entirety.
